DETAILED ACTION

1. In view of the Appeal Brief filed on 28 December 2007, PROSECUTION IS HEREBY REOPENED. A non final Office action set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated

by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 16-19 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-4 of US Patent No. 7,136,574. in view of Mori et al.

The difference between claims 16-19 of the present application and claims 1-4 of US Patent No. 7,136,574 is that claims 16-19 of the present application additionally recite that the additional audio information having an address information that is not found in claims 1-4 of US Patent No. 7,136,574. However it is noted that providing address information for audio information as well known in the art taught by Mori (Fig. 20). Therefore it would have been obvious to one of ordinary skill in the art to modify claims 1-4 of US Patent No. 7,136,574 by providing address information to the additional audio recited in claims 1-4 of US Patent No. 7,136,574 to accurately access the audio information and to produce claims 16-19 of the present application.

Further for claims 16-19 of the present application, claims 1-4 of US Patent No. 7,136,574 as modified with Mori further teaches recording and reproducing means for recording and reproducing the still picture information and management information from a first area and a second area on and from an optical disc since Mori teaches an apparatus having means for recording and reproducing still picture audio information and control information used for access the still picture information on an optical disc and claims 1-4 of US Patent No. 7,136,574 teach recording and reproducing the still picture information and control information on and from a first area and a second area of a medium.
